*"All appearances arise from luminous potentials aggregating as frequency giving rise to appearances as our shared dream. Vibrations, resonance, are the key mechanism behind human consciousness and all creation within the universes. Consciousness expands when we communicate heart-to-heart, from a place of love, with all living beings throughout the cosmos. As this shared resonance expands so too will the reality we wish to create. Now, more than ever, is the time we come together to expand this life-force for the benefit of all beings."*
